

Microsoft datacenters in Georgia

Datacenters provide the physical infrastructure for the technology we depend on at work and in our personal lives

A datacenter building houses thousands of computer servers and data storage devices connected to the internet

These buildings are similar in size and appearance to a distribution warehouse.

Microsoft aims to build datacenters that are best in class in performance, reliability, safety, aesthetics, and sustainability.

Compared to many other industrial facilities, datacenters do not create significant noise pollution or have a significant impact on traffic flow or congestion.

Microsoft operates more than 300 datacenters in over 34 countries.

Datacenters are part of everyday life

Whenever you open an app on your phone, join a virtual classroom or meeting, snap and save photos, or play a game with your friends online, you are using a datacenter.

Microsoft datacenters create local operations and construction jobs

Microsoft is currently building datacenter facilities in greater Atlanta.

We estimate it will require **1,050 construction roles annually** and approximately **6.6 million work hours** to complete.

By the end of 2026, we project **225 full-time employees and contractors** will work across all operational facilities.

Datacenter operations

- Campus management
- People management
- Learning and development
- IT operations
- Mechanical engineers
- Electrical engineers
- Security contractors
- Building maintenance
- Critical environments

Construction jobs

- Electricians
- Plumbers and pipefitters
- Carpenters
- Structural iron and steel workers
- Concrete workers
- Earth movers

Taxes from Microsoft datacenter operations represent important revenue for national, regional, and local governments

Microsoft datacenters represent a capital-intensive investment and long-term commitment to the community. This investment grows the commercial property tax base, increasing revenue for municipal services that benefit local citizens.

Examples of country, provincial, and local taxes that support cities, municipal services, schools, and colleges include:

Property taxes

Collected annually once land is purchased.

Indirect taxes

From construction and operation expenses. Examples include VAT, GST, and sales tax.

Income taxes

From construction and operations workers.

Microsoft is investing in local priorities in Atlanta

Investing in people of all ages through local skill-building programs

Providing pathways for datacenter careers

Atlanta Technical College is partnering with Microsoft to establish a Microsoft Datacenter Academy training lab in Atlanta, Georgia. The partnership will also provide funding for scholarships or certifications for underrepresented groups in the IT sector, including women, African American, Hispanic, and Indigenous students, and opportunities for mentorship and internship in Microsoft datacenters.

Partnering with environmental sustainability programs for local impact

Reclaiming the Flint headwaters

Finding the Flint's key initiative, The Flint River Headwaters Nature Preserve—funded by state and federal sources, along with matching funds from Microsoft and other private philanthropic partners—will transform a fenced-in site owned by local public transit agency MARTA into healthy, free-flowing river habitat accessible to the public.

CARBON

Microsoft pledged to become carbon negative by 2030 and to remove historical carbon since its 1975 founding by 2050.

Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching **100 percent renewable energy coverage by 2025.**

Microsoft has also committed by 2030 to:

- Be free of diesel.
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases.
- Reduce our Scope 3 emissions by more than half.

WATER

In 2020, Microsoft pledged to be water positive for our direct operations by 2030.

Through this commitment, we will replenish the water consumed by datacenter operations in water-stressed regions. We have also committed to **reduce water waste by 95 percent in our datacenter operations by 2024.**

WASTE

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of **90 percent reuse and recycle of servers and components by 2025** through our first-of-a-kind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our datacenters by implementing reuse and comprehensive recycling programs.

By 2030, Microsoft datacenters will be zero waste

ECOSYSTEMS

Microsoft has committed to **protecting more land than we use for direct operations by 2025.**

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

Georgia

Datacenter operations sustainability investments

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacenter operations.

For Microsoft datacenters located in Georgia we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

CARBON

1.12

Design power usage effectiveness (PUE)

Not yet in operation

We've committed to have **100% renewable energy coverage globally by 2025**

Leadership in Energy and Environmental Design (LEED) is the world's largest green building certification program. LEED certification is a globally recognized symbol of sustainability achievement and leadership.

New Microsoft datacenters are designed to earn **LEED Gold certification**.

[Learn about PUE >](#)

WATER

0.060 $\frac{\text{L}}{\text{kWh}}$

Design water usage effectiveness (WUE)

Not yet in operation

Microsoft will use **adiabatic cooling** at our Atlanta datacenter.

These datacenters use **outside air and zero water** when temperatures are below 29.4 degrees Celsius, **reducing cooling water use to less than 15 percent of the year**.

[Learn about WUE >](#)

WASTE

Microsoft Circular Centers can process up to

3,000

servers per month for reuse.

It takes five to six years from when a datacenter is operational to generate reusable assets. Once servers are ready to be decommissioned in this region, Microsoft is planning to open a **Georgia Circular Center**.

Globally, Microsoft datacenters **reuse 78 percent** of our end-of-life assets and components.
