

# Microsoft datacenters in Sweden

## Datacenters provide the physical infrastructure for the technology we depend on at work and in our personal lives

### A datacenter building houses thousands of computer servers and data storage devices connected to the internet

These buildings are similar in size and appearance to a distribution warehouse.

Microsoft aims to build datacenters that are best in class in performance, reliability, safety, aesthetics, and sustainability.

Compared to many other industrial facilities, datacenters do not create significant noise pollution or have a significant impact on traffic flow or congestion.

Microsoft operates more than 300 datacenters in over 34 countries.

### Datacenters are part of everyday life

Whenever you open an app on your phone, join a virtual classroom or meeting, snap and save photos, or play a game with your friends online, you are using a datacenter.

# Microsoft datacenters create local operations and construction jobs

Microsoft datacenters in Sweden currently employ **145 people**.

We estimate it will take approximately **5.3 million work hours** and more than **1,299 jobs** during peak construction to complete construction of the new datacenters.

By the end of 2026, we project **561 full-time employees and contractors** will work across all operational facilities.

## Datacenter operations

- Campus management
- People management
- Learning and development
- IT operations
- Mechanical engineers
- Electrical engineers
- Security contractors
- Building maintenance
- Critical environments

## Construction jobs

- Electricians
- Plumbers and pipefitters
- Carpenters
- Structural iron and steel workers
- Concrete workers
- Earth movers

## Taxes from Microsoft datacenter operations represent important revenue for national, regional, and local governments

Microsoft datacenters represent a capital-intensive investment and long-term commitment to the community. This investment grows the commercial property tax base, increasing revenue for municipal services that benefit local citizens.

Examples of country, provincial, and local taxes that support cities, municipal services, schools, and colleges include:

### Property taxes

Collected annually once land is purchased.

### Indirect taxes

From construction and operation expenses. Examples include VAT, GST, and sales tax.

### Income taxes

From construction and operations workers.

# Microsoft is investing in local priorities in Sweden

Microsoft community investments support community-identified priorities across **91 projects** in Sweden.

## Investing in people of all ages through local skill-building programs

### Inspiring youth with technology

Kodcentrum creates sustainable collaborations with organizations, upper secondary schools, and colleges to create interest in programming and STEAM/IT careers for children in Sandviken, Gävle, and Staffanstorp. With Microsoft, Kodcentrum offers meaningful activities during and after school where children can meet role models who can change their view of future educational opportunities, including programming, and strengthen the kids' self-esteem.

## Partnering with local nonprofit programs for education and empowerment

### Improving children's lives

Save the Children works to ensure that all children have access to their rights. In Gävle and Sandviken, it focuses on giving children meaningful leisure time, strengthening children's mental health, giving parents support, and strengthening children's safety online. The collaboration with Microsoft enables it to continue to have meeting places, invest in a music studio to promote young people's mental health through music-making and creativity, and develop a website by and for children (Lilla Rädda Barnen).

# Microsoft global commitments

## CARBON

**Microsoft pledged to become carbon negative by 2030 and to remove historical carbon since its 1975 founding by 2050.**

Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching **100 percent renewable energy coverage by 2025.**

Microsoft has also committed by 2030 to:

- Be free of diesel.
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases.
- Reduce our Scope 3 emissions by more than half.

## WATER

**In 2020, Microsoft pledged to be water positive for our direct operations by 2030.**

Through this commitment, we will replenish the water consumed by datacenter operations in water-stressed regions.

## WASTE

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of **90 percent reuse and recycle of servers and components by 2025** through our first-of-a-kind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our datacenters by implementing reuse and comprehensive recycling programs.

**By 2030, Microsoft datacenters will be zero waste**

## ECOSYSTEMS

Microsoft has committed to **protecting more land than we use for direct operations by 2025.**

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

# Sweden

## Datacenter operations sustainability investments

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacenter operations.

For Microsoft datacenters located in Sweden we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

Published April 2024. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as is and may change without notice.

### CARBON

We've committed to have **100% renewable energy coverage globally by 2025**.

Sweden was Microsoft's first region with **backup generators that run on Preem Evolution Diesel Plus**, which contains at least **50% renewable raw material** and a nearly equivalent reduction in net carbon dioxide emissions compared to standard fossil diesel blends. We have since completed generator fuel heater upgrades to transition to **100% renewable biofuel that will further reduce net carbon emissions**.

### WATER

Our facilities use **free cooling + humidification**. Water is used only for humidification and the majority is **harvested rainwater**.

Datacenter cooling water is typically **not treated with any chemicals or additives**.

When quality of the available water is not adequate for use in cooling systems, water treatment is pursued in the same way municipal drinking water is treated to remove excessive hardness or to prevent harmful bacterial growth.

Water from our cooling systems is discharged back to the local wastewater utility treatment plant, following local regulations.

This system is highly efficient, using **less electricity and a fraction of water used** by other water-based cooling systems, such as cooling towers.

### WASTE

It takes five to six years from when a datacenter is operational to generate reusable assets. Once server volumes reach critical levels, a **Circular Center** will be deployed for equipment processing.

Globally, Microsoft **reuses or recycles 90%+** of end-of-life assets.
