Datacentres provide the physical infrastructure for the technology we depend on at work and in our personal lives

A datacentre building houses thousands of computer servers and data storage devices connected to the internet

These buildings are similar in size and appearance to a distribution warehouse.

Microsoft aims to build datacentres that are best in class in performance, reliability, safety, aesthetics, and sustainability.

Compared to many other industrial facilities, datacentres do not create significant noise pollution or have a significant impact on traffic flow or congestion.

Microsoft operates more than 300 datacentres in over 34 countries.

Datacentres are part of everyday life

Whenever you open an app on your phone, join a virtual classroom or meeting, snap and save photos, or play a game with your friends online, you are using a datacentre.

Microsoft datacentres create local operations and construction jobs

Datacentre planning is currently underway in New Zealand.

We estimate it will require **120 construction roles** and approximately **756,000 work hours** to build the new datacentres.

By the end of 2026, we project **32 full-time employees and contractors** will work across all operational facilities.

Datacentre operations

- Campus management
- People management
- Learning and development
- IT operations
- Mechanical engineers
- Electrical engineers
- Security contractors
- Building maintenance
- Critical environments

Construction jobs

- Electricians
- Plumbers and pipefitters
- Carpenters
- Structural iron and steel workers
- Concrete workers
- Earth movers

Find Microsoft jobs in your community

Taxes from Microsoft datacentre operations represent important revenue for national, regional, and local governments

Microsoft datacentres represent a capital-intensive investment and long-term commitment to the community. This investment grows the commercial property tax base, increasing revenue for municipal services that benefit local citizens.

Examples of country, provincial, and local taxes that support cities, municipal services, schools, and colleges include:

Property taxes

Collected annually once land is purchased.

Indirect taxes

From construction and operation expenses. Examples include VAT, GST, and sales tax.

Income taxes

From construction and operations workers.

Microsoft is investing in local priorities in New Zealand

Microsoft community investments support community-identified priorities in New Zealand.

Investing in people of all cultures through local skill-building programs

Addressing urgent cybersecurity skills shortage

A joint initiative by Microsoft, TupuToa, Te Whatu Ora Health New Zealand, and vocational education provider Te Pūkenga aims to fill the huge need for skilled cybersecurity experts in New Zealand, while boosting diversity. This tailored education programme will help deliver cybersecurity training and apprenticeships to under-represented ākonga (learners) in Aotearoa New Zealand.

Partnering with environmental sustainability programs for local impact

Al-equipped drones study dolphins on the edge of extinction

Scientists and conservationists with the not-for-profit group MAUI63 are using a combination of drones, AI, and cloud technologies to support the conservation of the Māui dolphins, one of the rarest and most threatened dolphins in the sea with a known population of just 54.

Microsoft global commitments

Published April 2024. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as is and may change without notice.

CARBON

Microsoft pledged to become carbon negative by 2030 and to remove historical carbon since its 1975 founding by 2050.

Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching 100 percent renewable energy coverage by 2025.

Microsoft has also committed by 2030 to:

- Be free of diesel.
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases.
- Reduce our Scope 3 emissions by more than half.

WATER

In 2020, Microsoft pledged to be water positive for our direct operations by 2030.

Through this commitment, we will replenish the water consumed by datacentre operations in water-stressed regions.

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of 90 percent reuse and recycle of servers and components by 2025 through our first-of-akind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our
datacentres by implementing
reuse and comprehensive
recycling programs.

By 2030, Microsoft datacentres will be zero waste

ECOSYSTEMS

Microsoft has committed to protecting more land than we use for direct operations by 2025.

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

New Zealand Datacentre operations sustainability investments

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacentre operations.

For Microsoft datacentres located in New Zealand we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

Published April 2024. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as is and may change without notice.

CARBON

We've committed to have 100% renewable energy coverage globally by 2025.

In New Zealand, our datacentres will be designed for our backup generators to be powered by a **renewable biofuel that reduces net carbon emissions**.

Our facilities use **direct air** so no water is used for cooling.

Globally, Microsoft reuses or recycles **90%+** of end-of-life assets.

Microsoft is conducting research and development to improve waste diversion and increased recycling efficiency by identifying new recycling solutions for used air filters and fiber optic cables.
