

Microsoft datacenters in Wyoming

As we build and operate datacenters, we aim to address local challenges and create benefits for communities.

Our commitment is reflected in three key areas: advancing community prosperity, contributing to a sustainable future, and being a good neighbor through responsible operations.

About

We currently operate datacenters and are building new facilities in the greater Cheyenne area.

Jobs

Our operational datacenters employ approximately 220 people. We anticipate it will take approximately 1,810 construction jobs and 7.4 million hours to build the new datacenters.

Investments

Since 2018, Microsoft community investments supported 53 community-based initiatives in Cheyenne.

Water

Our existing facilities in Wyoming are cooled using direct evaporative cooling. Direct evaporative cooling uses water for cooling less than 10% of the year.

Living near a datacenter

Our practices include noise and light reduction, ecological restoration, and ensuring suppliers comply with local laws and environmental regulations.

Jobs

We partner with local suppliers and create well-paid construction and datacenter operations jobs.

Microsoft operates datacenters and is building new facilities in the greater Cheyenne area.

- As of 2025, these facilities currently employ approximately 220 people.
- We expect construction of the new datacenters to require approximately 7.4 million work hours and more than 1,810 jobs at peak activity.

Datacenter operations jobs

- Campus management
- People management
- Learning and development
- IT operations
- Mechanical engineers
- Electrical engineers
- Security contractors
- Building maintenance
- Critical environments

Construction jobs

- Electricians
- Plumbers and pipefitters
- Carpenters
- Structural iron and steel workers
- Concrete workers
- Earth movers

Advancing community prosperity and well-being

Our datacenters increase local economic activity, create jobs, and boost tax revenue, benefiting residents and the community.

Taxes and economic impact

Microsoft datacenters represent a capital-intensive investment and long-term commitment to the community.

Communities around the world can typically anticipate significant economic benefits in combined local output, employment income, and public revenue contributions—from a single large-scale datacenter.

- Local economies benefit through significant investments in land, construction, and infrastructure.
- Local businesses are supported through sourcing materials and services from nearby vendors and contractors.
- Operational activities—such as purchases from local businesses and utility usage—generate economic output and tax revenue.
- A datacenter presence can serve as a catalyst for technology sector growth, attracting startups, spurring innovation, and creating new job opportunities.

Community investments

Working with local partners, we invest in programs that reflect community priorities and use our strengths as a technology company.

Since 2018, Microsoft's community investments supported 53 locally identified projects in Wyoming, including:

- Wyoming Community Foundation: Microsoft Technology and Sustainability Grant Program
- Boys and Girls Club Workforce Readiness Program
- Gener8tor Skills Accelerator
- Career training for low-income single mothers with Climb Wyoming
- Wireless LAN support and tech refresh for COMEA Shelter

Datacenter Academy

Microsoft collaborated with Laramie County Community College to open the Datacenter Academy, helping job seekers and students in Cheyenne gain in-demand technology skills.

- In 2024–2025, the program had 123 students.
- To date, we have employed 10 Datacenter Academy students as interns.

Contributing to a sustainable future

Our datacenters are designed for high efficiency, using less energy and water than traditional enterprise facilities.

Energy

- We've committed to achieving 100% renewable energy coverage globally by 2025. In this region, we will fulfill that commitment through a power purchase agreement with Cheyenne Light.
- Our datacenters in Wyoming are transitioning the backup generators that are not using natural gas fuel to use a renewable biofuel that reduces net carbon emissions.

Water

- Our existing facilities are cooled using direct evaporative cooling.
- Direct evaporative cooling uses water for cooling less than 10% of the year.
- In Wyoming, Microsoft purchases water from BOPU. On warm days when the temperature exceeds 85°F (29.4°C), water flows into the facility and cycles through the cooling system between 2–5 times. A portion of the water evaporates, while the remainder is typically discharged back to the local wastewater treatment plant in compliance with local regulations.
- We work with local utilities to ensure the community has ample water resources. We have made financial investments in water infrastructure across the globe, replacing and extending decades-old facilities that benefit local residents. These investments also pave the way for community growth.
- To learn more, visit the [datacenter water consumption fact sheet](#).

Waste

- In 2020, as part of our goal to become zero waste by 2030, we set a target of reusing or recycling 90% of our end-of-life assets globally.
- We reached a 90.9% reuse and recycling rate in 2024. Microsoft Circular Centers—which process decommissioned servers and cloud hardware—were a key part of that success.

Operating responsibly as a good neighbor

Each datacenter has a unique design, where the environment, community, and safety are prioritized.

Living near a datacenter

Vegetative screening and building setbacks are included where possible and in accordance with local ordinances.

Unlike distribution warehouses, datacenters do not generate constant truck traffic. Deliveries are infrequent. Each building typically supports around 50 employees working in shifts across 24 hours, resulting in minimal parking lot traffic. Employee arrivals and departures are also staggered to avoid large shift changes.

The main sources of sound at datacenters include employee vehicles, occasional truck deliveries, backup generators, and HVAC equipment. Building setbacks help minimize the noise from backup generators and HVAC equipment.

Exterior lighting is strategically placed around buildings, parking lots, roadways, sidewalks, and perimeter fencing. Fixtures are designed to direct light downward, ensuring security while minimizing light pollution.

During construction Microsoft's general contractors comply with local noise ordinances and specifications outlined in the permitting process.

The community is informed of permitted work hours and other updates through the [Microsoft in your community](#) blog.
